

Test PDF Document

This is a test PDF document created to verify the PDF parsing functionality.

The system supports multiple parsing methods:

1. pypdf - Fast parsing for text-based PDFs
2. pdfplumber - More robust parsing as fallback
3. OCR with Tesseract - For scanned documents

Features:

- Automatic file type detection
- Multiple encoding support
- Comprehensive error handling
- Detailed logging

This PDF should be successfully parsed by any of the first two methods, as it contains standard text content.

If you see this text in the parsed output, the PDF parsing is working correctly!
